PROFESSIONAL ENGINEERING PORTFOLIO

Kedibone Isabel Moukangwe

Configuration & Change Management | Engineering Data | Product Lifecycle Control

Gauteng, South Africa • Remote & international opportunities

Professional positioning

Electrical Engineering graduate with 8+ years of configuration management experience across engineering and manufacturing. Experienced in engineering documentation, BOM and product data administration, revision control, configuration traceability, and engineering change support. Worked with railway electrical assemblies and their configuration documentation supplied to Alstom while at Radel; independently developed assembly instructions from engineering drawings and BOMs during New Product Introduction (NPI).

Expertise at a glance

• Configuration identification, baseline integrity and status accounting

• Engineering change coordination and CCB / CRB participation

• BOMs, product structures, part numbering and revision control

• IFS ERP and HANSA ERP; technical documentation and NPI

• Completed Project Management and Systems Engineering courses

Portfolio navigation

01 Railway product introduction | 02 Engineering change control | 03 BOM & revision traceability | 04 Configuration governance | 05 Sample technical artefacts

CONFIDENTIALITY NOTE: All example datasets, product IDs, metrics, workflow scenarios and templates in this portfolio are simulated and are not customer or employer records.

01 / EXPERIENCE-BASED CASE STUDY

Railway electrical product introduction

Context

At Radel, supported configuration administration for railway electrical products supplied to Alstom, including wiring harnesses and lighting assemblies.

My contribution

• Handled configuration documentation for railway-related components and assemblies.

• Independently interpreted engineering drawings and Bills of Materials to develop assembly instructions for new product introduction.

• Physically assembled selected electrical components, building practical understanding of manufacturing requirements.

• Supported product data and configuration administration using HANSA ERP.

Illustrative technical documentation chain

INPUT	TRANSFORMATION	CONTROLLED OUTPUT
Engineering drawing	Interpret components & sequence	Assembly instruction
Bill of Materials	Check parts and quantities	Parts / materials checklist
Approved revision	Confirm applicable baseline	Instruction revision reference

The table above is an independently constructed illustrative workflow, not a reproduction of Radel or Alstom documentation.

Engineering change & configuration control

Experience foundation — Fuchs Electronics

• Maintain controlled engineering documents and configuration records.

• Administer BOM structures and associated product data in IFS ERP.

• Allocate part and document numbers and support revision-controlled technical records.

• Support engineering change documentation and participate in CCB / CRB meetings.

Simulated engineering change lifecycle

01 Request logged

02 Completeness check

03 Impact assessment

04 CCB / CRB review

05 Approval & release

06 Implementation & closure

Sample decision record — fictional

Change ID: DEMO-ECR-024 **Item:** DEMO-LGT-110 **Status:** Approved (simulated)

Change: Update mounting bracket for a fictional lighting assembly. **Assessment:** Review fit, BOM, work instructions, cost, schedule and verification impact. **Closure evidence:** revised BOM, released drawing, updated instruction, implementation sign-off.

No claim is made that this sample change or its approval occurred in an actual employer environment.

Product data & status accounting

Example configuration register

ITEM	REV	DESCRIPTION	STATUS
DEMO-HRN-101	B	Wiring harness	Released
DEMO-LGT-110	C	Light assembly	Released
DEMO-BRK-205	A	Mounting bracket	Under review
DEMO-INS-007	D	Assembly instruction	Released

Demonstration dashboard — not actual performance

Change requests: 24 total | 14 closed | 6 in review | 4 open

Simulated closure rate: 58.3% | Open / in-review backlog: 10

Example tracking dimensions: request age, change owner, affected CI, revision, decision, implementation evidence

What the artefacts demonstrate

• End-to-end traceability between a configuration item, revision, controlled documentation and change status.

• Structured status accounting for audit preparation and engineering stakeholder reporting.

• A repeatable digital work product suitable for remote collaboration.

Ready for broader CCM responsibility

Governance exposure

Recent participation in Configuration Control Board and Change Review Board activities, supported by manager-led mentoring. This is governance exposure and development, not a claim of having independently chaired boards or owned a full project CCM function.

Illustrative Configuration Management Plan outline

- Purpose, scope, applicable standards and product boundaries
- Configuration items, identification rules and baseline strategy
- Change request lifecycle, decision authorities and board responsibilities
- Configuration status accounting, audit and reporting cadence
- Access rights, data integrity, risk escalation and corrective actions

Tools and learning

Hands-on: IFS ERP, HANSA ERP, Microsoft Excel, engineering document control, BOM administration and technical instructions.

Completed learning: Project Management, Systems Engineering, Digital Record Keeping & Compliance.

Development focus: Formal CMP ownership, project-level CCM leadership and additional PLM platforms.
